# What is the PHP ?

---

PHP is an acronym for "PHP: Hypertext Preprocessor"

- It is widely-used, open source scripting language
- PHP scripts are executed on the server
- Free to download and use
- PHP files can contain text, HTML, CSS, JavaScript, and PHP code
- PHP code are executed on the server, and the result is returned to the browser as plain HTML
- PHP files have extension ".php" , ".php3" , ".phtml"

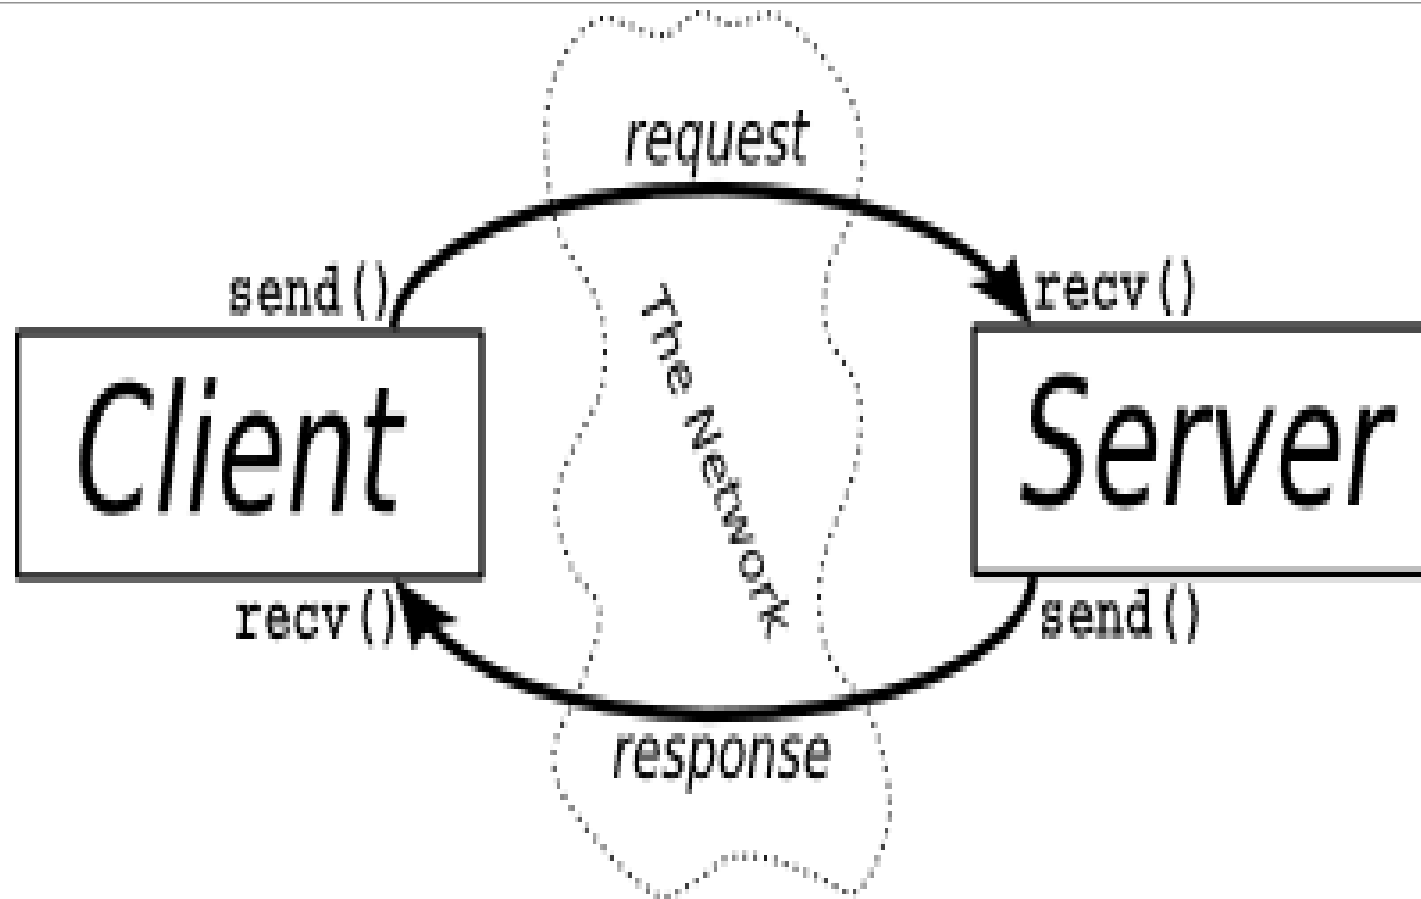

# History of PHP

---

- PHP was start developing in 1994.
- PHP was originally developed by the Danish Greenlander Rasmus Lerdorf.
- It was subsequently developed as open source.
- PHP is an HTML-embedded scripting language. Much of its syntax is borrowed from C, Java and Perl.
- The goal of the language is to allow web developers to write dynamically generated pages quickly.

# Client and Server Architecture

---

# Why PHP ?

- PHP runs on various platforms (Windows, Linux, Unix, Mac OS X, etc.)
- PHP is compatible with almost all servers used today (Apache, IIS, etc.)
- PHP supports a wide range of databases
- PHP is free. Download it from the official PHP resource: [www.php.net](http://www.php.net)
- PHP is easy to learn and runs efficiently on the server side.

# Why choose PHP as CAREER?

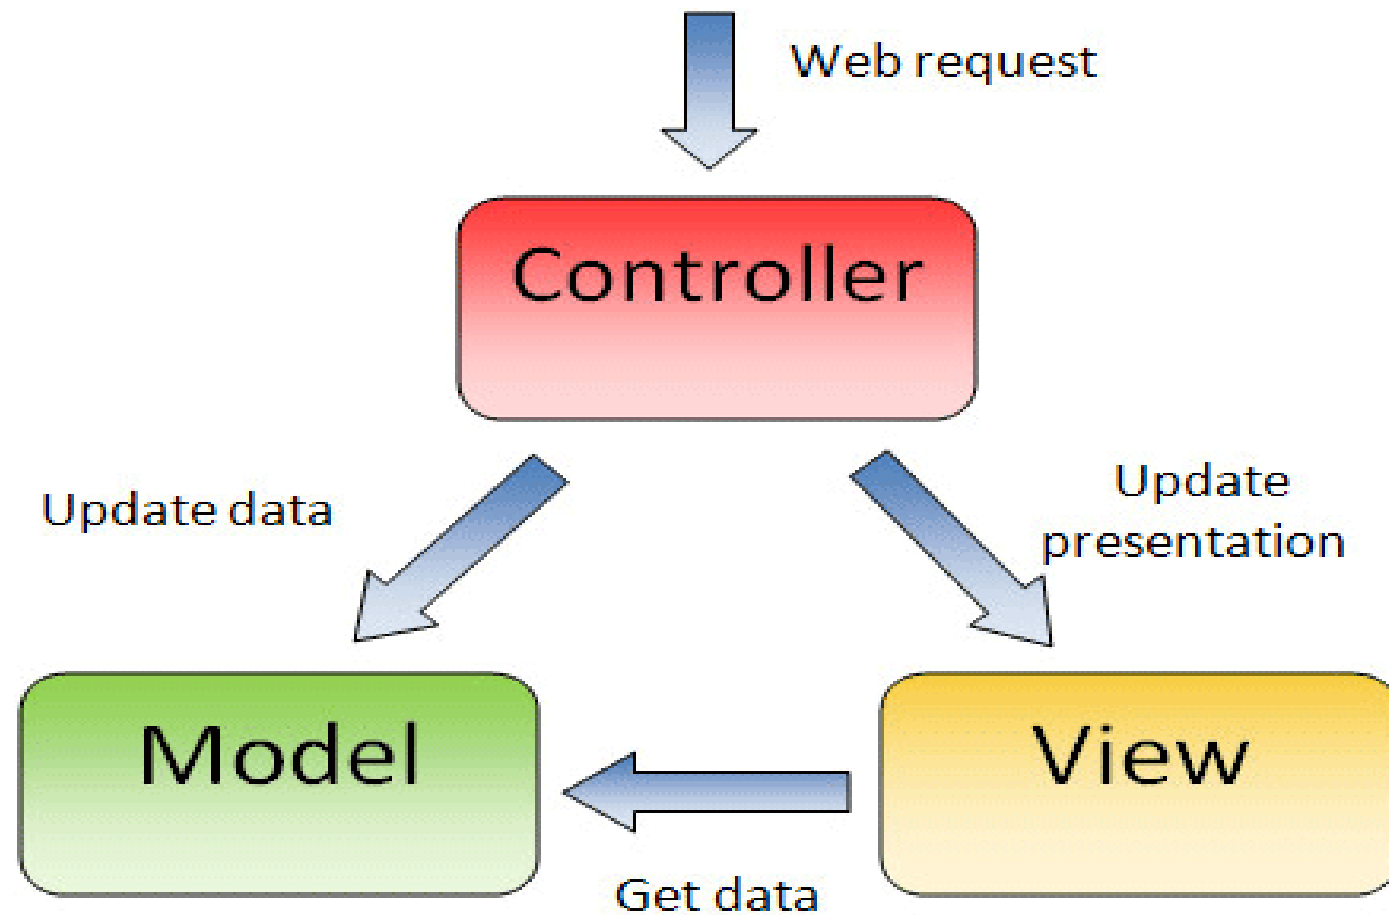

- High Demand for Programmers
- Work with dream MNC
- Work As Freelancer
- White Collar Job
- Opportunities abroad
- Salaries offered to programmers (Fresher) range from 10,000 to 20,000 per month
- Work with Microsoft technologies
- Get global certifications and get recognized

# Strength of PHP

- MVC
- Frameworks
- CMS(Content Management System)

# MVC

---

# PHP Framework.

# What is CakePHP ?

- CakePHP is a free , open-source , rapid development framework for PHP.
- It's a foundational structure for programmers to create web applications.
- Primary goal is to work in a structured and rapid manner—without loss of flexibility.
- CakePHP has an active developer team and community, bringing great value to the project.
- In addition to keeping you from wheel-reinventing, using CakePHP means your application's
- core is well tested and is being constantly improved.

# What is the CMS ?

- It's easy to add and remove the new page in application.
- CMS helps in saving time
- Difference Between CMS and Framework is that you can create the CMS using framework but not framework using CMS.
- CMS is the product of framework.

# List of CMS
